Background:	Transient receptor potential cation channel, subfamily C, member 7, also known as TRPC7, is a non-selective cation channel that is directly activated by DAG. TrpC7 shows constitutive activity and susceptibility to negative regulartion by extracellular Ca2+. Because of this, TrpC7 plays an important role in the Ca2+ signaling pathway . TrpC7 is also expressed abundantly in the heart, and combined with its ability to act as a Ca2+ channel, TrpC7 might contribute to the process of heart failure .
Synonyms:	TRP7
Note:	Detects ~100kDa.
Protein Families:	Druggable Genome, Ion Channels: Transient receptor potential, Transmembrane
