| The protein encoded by this gene belongs to the subtilisin-like proprotein convertase family.<br>The members of this family are proprotein convertases that process latent precursor proteins<br>into their biologically active products. This encoded protein is a calcium-dependent serine<br>endoprotease. It is structurally related to its family members, PACE and PACE4. This protein is<br>concentrated in the trans-Golgi network, associated with the membranes, and is not secreted.<br>It can process proalbumin and is thought to be responsible for the activation of HIV envelope<br>glycoproteins gp160 and gp140. This gene has been implicated in the transcriptional<br>regulation of housekeeping genes. Multiple alternatively spliced transcripts are described for<br>this gene but their full length nature is not yet known. Downstream of this gene's map<br>location at 11q23-q24, nucleotides that match part of this gene's 3' end are duplicated and |

Anti-PCSK7 mouse monoclonal antibody (TA500628) immunofluorescent staining of COS7 cells transiently transfected by pCMV6-ENTRY PCSK7 ([RC203896]).

HEK293T cells transfected with either [RC203896] overexpress plasmid (Red) or empty vector control plasmid (Blue) were immunostained by anti-PCSK7 antibody (TA500628), and then analyzed by flow cytometry.
