HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY C1R ([RC223007], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-C1R. Positive lysates [LY400654] (100ug) and [LC400654] (20ug) can be purchased separately from OriGene.

HEK293T cells transfected with either [RC223007] overexpress plasmid (Red) or empty vector control plasmid (Blue) were immunostained by anti-C1R antibody (TA800084), and then analyzed by flow cytometry.
