Background:	<p>SAMSN1 is a member of a novel gene family of putative adaptors and scaffold proteins containing SH3 and SAM (sterile alpha motif) domains (Claudio et al., 2001 [PubMed 11536050]). [supplied by OMIM, Mar 2008]. Transcript Variant: This variant (2) contains alternate exons at the 5' end and initiates translation from an alternate start codon compared to variant 1. The resulting longer isoform (2) has a distinct N-terminus compared to isoform 1. Sequence Note: This RefSeq record was created from transcript and genomic sequence data to make the sequence consistent with the reference genome assembly. The genomic coordinates used for the transcript record were based on transcript alignments.</p> <p>##Evidence-Data-START## Transcript exon combination :: AF218085.2 [ECO:0000332] RNAseq introns :: mixed/partial sample support ERS025081, ERS025082 [ECO:0000350] ##Evidence-Data-END## COMPLETENESS: complete on the 3' end.</p>

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY SAMSN1 ([RC203721], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-SAMSN1 (1:2000). Positive lysates [LY402912] (100ug) and [LC402912] (20ug) can be purchased separately from OriGene.
