<b>Background:</b>	This gene product belongs to the tektin family of proteins. Tektins comprise a family of filament-forming proteins that are coassembled with tubulins to form ciliary and flagellar microtubules. This gene is expressed in the testis and its protein is localized to the flagella of the sperms, indicating that it may play a role in spermatogenesis. [provided by RefSeq, Jul 2008]

## Product images:

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY TEKT2 ([RC207425], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-TEKT2 (1:2000). Positive lysates [LY415231] (100ug) and [LC415231] (20ug) can be purchased separately from OriGene.

Western blot analysis of extracts (35ug) from 2 different cell lines by using anti-TEKT2 monoclonal antibody (1:500).
